Project Name	Smart-Lender-Loan-Eligibility-Prediction
Maximum Marks	5 Marks

Coding & Solution

Thissectionevaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/shaikhaneef1/Smart-Lender-Loan-Eligibility-Prediction
Programming Language(s)	Python, HTML5, CSS3, JavaScript
Framework(s) Used	Flask, Scikit-learn Loan eligibility prediction using Machine Learning.
Key Features Implemented	• • Data preprocessing and feature encoding. • Flask-based web application. • User-friendly interface for entering applicant details. • Real-time loan approval prediction. • Trained ML model integration using Pickle. • Input validation and prediction result display.
Pending / Incomplete Features	Cloud deployment. Database integration. User authentication. Prediction history storage.
Setup / Run Instructions	1. Clone the GitHub repository. 2. Install the required Python libraries using requirements.txt. 3. Open the project folder. 4. Run app.py. 5. Open the Flask application in the browser. 6. Enter applicant details and click Predict.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The Smart Lender project is developed using Python, Flask, and Scikit-learn to predict loan eligibility based on applicant information. The project follows a modular architecture with separate components for data preprocessing, machine learning model training, and web application deployment. The source code is maintained in a GitHub repository, making it easy to maintain, enhance, and deploy in future.
