

### Project Executable Files

|                      |                                          |
|----------------------|------------------------------------------|
| <b>Date</b>          | 04 July 2026                             |
| <b>Team ID</b>       | XXXXXX                                   |
| <b>Project Name</b>  | Smart-Lender-Loan-Eligibility-Prediction |
| <b>Maximum Marks</b> | 3 Marks                                  |

### Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

#### Step 1: Submission Checklist

| S.No | Item to Submit                                                  | Submitted (Yes / No / NA) |
|------|-----------------------------------------------------------------|---------------------------|
| 1    | Complete source code (all files and folders)                    | Yes                       |
| 2    | README / Setup Guide (instructions to run the project)          | Yes                       |
| 3    | requirements.txt / package.json / dependency file               | Yes                       |
| 4    | Database schema / seed files (if applicable)                    | NA                        |
| 5    | Environment configuration file (.env.example or similar)        | No                        |
| 6    | Deployed application URL (if hosted)                            | No                        |
| 7    | APK / Executable binary (if applicable for mobile/desktop apps) | NA                        |
| 8    | Dockerfile / Containerization config (if applicable)            | No                        |
| 9    | Test files and test results                                     | Yes                       |
| 10   | Demo video or walkthrough (if required)                         | Yes                       |

## Step 2: File / Folder Structure

```

### Step 3: Deployment / Access Details

| Field                              | Details                                                                                                                                                                                   |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hosted / Deployed URL</b>       | Not Deployed (Runs on Local Flask Server)                                                                                                                                                 |
| <b>Login Credentials (Demo)</b>    | Not Applicable                                                                                                                                                                            |
| <b>Platform / Hosting Provider</b> | Local System (Flask Development Server)                                                                                                                                                   |
| <b>Repository Link</b>             | <a href="https://github.com/shaikhaneef1/Smart-Lender-Loan-Eligibility-Prediction">https://github.com/shaikhaneef1/Smart-Lender-Loan-Eligibility-Prediction</a>                           |
| <b>Demo Video Link</b>             | <a href="https://drive.google.com/file/d/1p4G1UBSqyxJhw-Q2AJKophssfltRM8NW/view?usp=drive_link">https://drive.google.com/file/d/1p4G1UBSqyxJhw-Q2AJKophssfltRM8NW/view?usp=drive_link</a> |

## Step 4: Run Instructions

Provided clear, step-by-step instructions for the evaluator to run your project locally:

1. Download or clone the project repository.
2. Open the project folder in Visual Studio Code or any Python IDE.
3. Install all required packages:

```
pip install -r requirements.txt
```

4. Navigate to the Flask project directory.
5. Run the application:

```
python app.py
```

6. Open the browser and visit:

```
http://127.0.0.1:5000
```

7. Enter the applicant details and click **Predict** to view the loan eligibility result.

## Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation                        | Workaround / Status                                          |
|------|-------------------------------------------------|--------------------------------------------------------------|
| 1    | Application runs only on a local Flask server.  | Can be deployed to cloud platform in the future.             |
| 2    | Uses a static trained machine learning model.   | Retrain the model with updated datasets to improve accuracy. |
| 3    | No user authentication or database integration. | Can be added in future versions for enhanced functionality.  |
